

HOME IMPROVEMENTS

Concrete Design

IMAGINE THE POSSIBILITIES...

Suggest concrete countertops for a new kitchen and most people think of thick grey side walks and driveways. On the contrary, concrete can be sleek and graceful. Today, concrete is undergoing a transformation. Drab clunky gray is giving way to an entire palate of colors, surprising textures and bold experimental forms. This tactile material can be made to appear slick and shiny or textured and muted. Colorful, and unique, concrete can be found in the home as counter tops, bathtubs, sinks, furniture, fireplace mantels, and floors.

Concrete counter tops have become a fast growing favorite with designers and architects because concrete gives a warmth and color depth not previously available in more traditional surface materials. This surprisingly tactile material is warm and natural looking and corresponds beautifully with the popularity of a variety of materials like wood, stone, brick, marble, and stainless steel. Color pigments, various aggregates and coatings can give concrete the look, texture & feel of quarried stone such as marble, limestone, or granite. Because concrete is cast in molds it can easily include decorative objects (such as fossils, glass, coins or pieces of metal), or even change thickness or contour, which lends itself to a truly unique look. Concrete

exhibits subtle variations in color and texture, which most people feel contributes to its beauty...and each slab is hand cast, so none will be exactly identical.

Is a concrete counter top for you?

To better determine whether concrete is the best material for you, consider how closely you believe that:

- You want a look that is unique and personalized
- You appreciate high quality, hand crafted items
- You want something that looks natural and has character
- You find granite to common
- Synthetic surface materials look and feel like plastic
- You'd like a color or texture not available with other counter top materials

Concrete counter tops may just be for you. If you have imagination, ACE Concrete can create it! For more information call ACE Concrete at (818) 504-0424, or visit their web site at www.AceConcrete.com
