Beautiful Skraffino Concrete Microtoppings Fulfill a Variety of Applications as an Alternative to SkimStone For Interiors and Exteriors, Horizontal and Verticals

(HAYWARD, CA – May 26, 2021) – As the U.S. economy continues to recover, millions of homeowners and businesses are upgrading their homes and offices. One of the most important construction materials is flooring, though some are in short supply because of high demand or a lack of raw materials.

Skraffino Concrete Microtoppings offer a seamless, cost-effective, robust formulation for a wide variety of applications — both residential, commercial and retail — horizontal and verticals — in interiors and exteriors. It is an excellent choice as an alternative to SkimStone and Milestone, which announced on April 6, 2021 that they will no longer manufacture and supply these products.

Contemporary high-rise buildings, lofts, and apartments are typical candidates for Skraffino seamless microcement floors and walls. That's why it's become the most user-friendly microtopping on the market.

Skraffino benefits include more potential opportunities for contractors and designers, including:

- The convenience and versatility of a decorative concrete finish that can be applied to walls and floors
- Application on concrete, as well as tiles, plywood, laminates and gypsum underlayments
- A nearly infinite number of color options and textures
- Ease of installation – used by contractors nationwide
- A cost-effective solution for resurfacing new or old concrete – comparable or less than hardwood, ceramic or porcelain tile, commercial carpet, and marble
- Durability – will last for the life of your home or business
- Low maintenance – resealing once every 4-5 years for residences; a clear sealer reapplied once every few years for commercial properties
